

Review of Topic: Kennedy's MMR Stance Draws Fire

Health and Human Services Secretary Robert F. Kennedy Jr. has faced criticism from both allies and vaccine skeptics after publicly endorsing the MMR vaccine amidst a measles outbreak. This endorsement has angered individuals and organizations who previously supported his views on vaccine safety, including his former organization Children's Health Defense. While Kennedy cited the MMR vaccine's effectiveness, his past anti-vaccine stance and recent actions, such as controversial appointments and promoting unproven treatments, suggest his views may not have fully shifted. Consequently, questions and calls for clarification have emerged regarding his current position on vaccine policy.

Sources Reviewed:

- Excerpts from "65525906-ce78-4557-9dbe-25289b027470.mp3" (World Alternative Media - Josh Sigersonson)
- Excerpts from "Kennedy's MMR Endorsement Sparks Backlash from MAHA Allies and Medical Skeptics – [your]NEWS.pdf" (yournews.com)

Executive Summary:

Health and Human Services Secretary Robert F. Kennedy Jr.'s recent public endorsement of the MMR vaccine as "the most effective way to prevent the spread of measles" during a measles outbreak has generated significant backlash and controversy. This stance represents a notable shift from his long-standing criticism of vaccine safety and mandates, a position that garnered him a large following within the "medical freedom" movement. Sources indicate that this endorsement has alienated some of his key allies and supporters, including prominent anti-vaccine figures and his former organization, Children's Health Defense. Critics view this as a betrayal of his past principles and a sign of his co-option by the "pharma-funded" establishment, while even some within his former movement express disappointment that he did not emphasize "informed consent" alongside his endorsement. This event raises questions about the future direction of his health policies and his standing within both the medical freedom community and the Biden administration he serves.

Main Themes and Important Ideas/Facts:

1. RFK Jr.'s Endorsement of the MMR Vaccine:

- As reported by *yournews.com*, Health and Human Services Secretary Robert F. Kennedy Jr. stated that the "MMR vaccine remains 'the most effective way to prevent the spread of measles,'" according to *The Wall Street Journal*. This statement was made amidst a deadly measles outbreak in Texas and other states.
- Josh Sigersonson of World Alternative Media highlights this as a significant departure from RFK Jr.'s past statements against the MMR vaccine, noting, "RFK Jr. goes out and says the most effective way to prevent the spread of measles is the MMR vaccine. Going against years and years and years of things that he said, about 20 years of his declarations..."

2. Immediate and Strong Backlash:

- From Anti-Vaccine Advocates: Del Bigtree, a former communications director for Kennedy and a prominent anti-vaccine voice, responded critically, stating on X (formerly Twitter): "Your post got cut off. The MMR is also one of the most effective ways to cause autism." (*yournews.com*)

- From Children's Health Defense (CHD): Kennedy's former organization sought to distance itself from his remarks. CEO Mary Holland stated, "'Bobby Kennedy was our founder, but Bobby Kennedy is now the Secretary of HHS,' said CEO Mary Holland. 'He is in a completely different role than he was in, and what he says does not speak for Children's Health Defense in any way at this point.'" (*yournews.com*)
- From MAHA Allies: Even some supporters within the Make America Healthy Again (MAHA) movement, which backed Kennedy's presidential campaign, expressed disappointment. One ally stated, "He should have stood for informed consent," referencing documented rare MMR vaccine reactions. (*yournews.com*) Zen Honeycutt of Moms Across America urged Kennedy to "provide clarity on his statement and balance it with acknowledgment of the risks of potential serious and sometimes deadly side effects of the MMR vaccine." (*yournews.com*)

3. Skepticism and Allegations of Co-option:

- Josh Sigersonson of World Alternative Media frames RFK Jr.'s endorsement as a predictable outcome of his confirmation by a "pharma funded house" and meetings with figures like Albert Bourla (Pfizer CEO) and Bill Gates. He asserts, "Again, this was obviously going to happen... I mean, this was always going to happen."
- Sigersonson suggests RFK Jr.'s previous anti-vaccine stance was a deceptive tactic, stating, "But the reality always comes and slaps you in the face later because of course they are doing this to let people sit on their hands and relax for a while while they do things around the corner..."
- He draws parallels to other figures who he believes have been similarly co-opted, like Tulsi Gabbard, who he claims have "licked the boot and kissed the boot."

4. Historical Arguments Against Vaccine Safety (as presented by World Alternative Media):

- Sigersonson reiterates long-standing claims that measles is a "simple illness that you get over real quickly" and that "the vast majority of people who die from measles actually not dying from measles, but dying from the injection."
- He cites articles from Natural News and Children's Health Defense from past years alleging that measles vaccines are more dangerous than measles itself, referencing claims of "no US measles deaths in 10 years, but over 100 measles vaccine deaths reported" (from 2015) and that "measles vaccines kill more children than measles, and it's not even close" (from 2019).
- He promotes the idea that outbreaks of diseases like measles, chickenpox, smallpox, and polio are linked to autoimmune disorders potentially caused by vaccinations. He references a historical postcard from 1875 that supposedly reveals "small pox vaccines caused smallpox."

5. Kennedy's Conflicting Actions (as reported by yournews.com):

- Despite his MMR endorsement, Kennedy has taken actions that seemingly align with vaccine skeptics, including appointing David Geier, a controversial figure in the vaccine-autism debate, to lead federal vaccine research and dismissing Dr. Peter Marks, the FDA's top vaccine official.
- He also canceled a planned meeting on next year's flu vaccine coordination.
- Critics also note his continued praise for alternative measles treatments not proven effective against the virus.

6. Call to Action and Promotion of Alternative Health Solutions (World Alternative Media):

- Josh Sigersonson urges listeners to "stop waiting for the state to help you" and to "reject the system" by ditching their doctors and seeking alternative healthcare practitioners like Christian Yordanov (promoted via a specific website link).
- He also promotes "leatril" from Richardson Nutritional Center as an alternative cancer treatment and encourages listeners to stock up on long-term storable foods from various sources, including WHAM Beef and Heaven's Harvest, suggesting an impending crisis and food restrictions.
- He advises listeners to avoid the "CBDC system" and invest in physical precious metals.
- Sigersonson emphasizes the need for individual responsibility for health and warns against trusting the government, which he characterizes as "organized crime" that wants people "weak, stupid, uh, ill, sick, and dumb" to maintain control.

7. Financial Appeal (World Alternative Media):

- Josh Sigersonson makes a direct appeal for financial support for World Alternative Media, citing a significant loss of revenue and the risk of bankruptcy due to their non-mainstream stance. He provides various donation methods.

Quotes from Original Sources:

- RFK Jr. (as reported by *yournews.com*): "MMR vaccine remains 'the most effective way to prevent the spread of measles.'"
- Josh Sigersonson: "RFK Jr. goes out and says the most effective way to prevent the spread of measles is the MMR vaccine. Going against years and years and years of things that he said, about 20 years of his declarations..."
- Del Bigtree: "Your post got cut off. The MMR is also one of the most effective ways to cause autism."
- Mary Holland (Children's Health Defense): "'Bobby Kennedy was our founder, but Bobby Kennedy is now the Secretary of HHS...and what he says does not speak for Children's Health Defense in any way at this point.'"
- MAHA Ally (anonymous): "He should have stood for informed consent."
- Zen Honeycutt (Moms Across America): "We urge Kennedy to provide clarity on his statement and balance it with acknowledgment of the risks of potential serious and sometimes deadly side effects of the MMR vaccine."
- Josh Sigersonson: "Again, this was obviously going to happen... I mean, this was always going to happen."
- Josh Sigersonson: "But the reality always comes and slaps you in the face later because of course they are doing this to let people sit on their hands and relax for a while while they do things around the corner..."
- Josh Sigersonson: "stop waiting for the state to help you...reject the system. Go and ditch your doctor today."
- Josh Sigersonson: "Government is organized crime. It goes in circles forever."

Potential Implications:

- Erosion of trust in RFK Jr. among his former supporters within the medical freedom movement.
- Increased scrutiny of his health policy decisions as HHS Secretary.
- Further polarization of the debate surrounding vaccine safety and public health measures.
- Potential for the "medical freedom" movement to seek new figureheads and strategies.
- Reinforcement of existing distrust in mainstream medical institutions and government among certain segments of the population.

Further Considerations:

- It would be beneficial to review RFK Jr.'s original statement in *The Wall Street Journal* for full context.
- Investigating the specific claims made by World Alternative Media regarding measles deaths and vaccine safety would require consulting credible scientific and public health data.
- Analyzing the potential motivations behind RFK Jr.'s apparent shift in stance would require further information and analysis.

convert_to_textConvert to source

1. Why is RFK Jr. facing criticism from his former allies and supporters regarding the MMR vaccine?

RFK Jr., who previously voiced concerns about vaccine safety and mandates, has recently stated that the MMR vaccine is the "most effective way to prevent the spread of measles." This endorsement during a measles outbreak contradicts his past statements and the general sentiment of the "medical freedom movement" and his former organization, Children's Health Defense. These groups are concerned about potential side effects of vaccines and advocate for informed consent and vaccine choice, viewing his statement as a departure from these principles.

2. How has Children's Health Defense, the organization RFK Jr. founded, responded to his MMR endorsement?

Children's Health Defense has publicly distanced itself from RFK Jr.'s remarks. CEO Mary Holland stated that while he was the founder, his current role as Secretary of HHS means his statements no longer reflect the organization's views. This highlights a clear divergence between RFK Jr.'s current position in government and the long-standing stance of the advocacy group he established.

3. What are the concerns raised about the safety and efficacy of the MMR vaccine in the provided sources?

Concerns raised include the argument that the MMR vaccine is more dangerous than measles itself, with claims of more deaths and severe health issues linked to the vaccine than to the disease. It's suggested that measles is often a mild illness, and that adverse reactions to the vaccine, including potential autoimmune disorders and long-term health problems, are significant. There are also references to historical examples, like smallpox vaccines allegedly causing smallpox, to suggest that vaccines can be the source of the diseases they are meant to prevent or contribute to other health issues.

4. What is the perspective presented in the sources regarding government and pharmaceutical influence on health policies?

The sources express a deep distrust of government and the pharmaceutical industry, suggesting that health policies are driven by financial interests and a desire for control rather than genuine public health. RFK Jr.'s confirmation by a "pharma funded house" and meetings with pharmaceutical CEOs are cited as evidence of this influence. The idea that the government benefits from a sick and dependent populace is also presented, encouraging individuals to "reject the system" and take personal responsibility for their health.

5. What alternative approaches to health and disease prevention are promoted in the provided audio excerpt?

The audio excerpt strongly advocates for individuals to "ditch their doctor" and seek natural health alternatives. It promotes working with a functional health practitioner focused on longevity and natural health solutions. Additionally, it recommends specific products and resources like apricot seeds/Laetrile (Vitamin B17), freeze-dried foods for long-term storage, and sourcing meat from farms practicing regenerative agriculture, emphasizing self-reliance and avoiding conventional medical and food systems.

6. What is the "Great Reset" agenda mentioned in the audio excerpt, and how does the speaker view current events in relation to it?

The speaker views many current events, including health policies, food restrictions (like those related to bird flu), and the push for digital IDs and AI, as interconnected parts of a "Great Reset" agenda. This agenda is portrayed as a move towards increased control and dependency, orchestrated by powerful entities. RFK Jr.'s shift in stance on the MMR vaccine is seen as a step aligning with this agenda, despite his initial image as a health freedom advocate.

7. What historical examples are used to support the skepticism towards vaccines in the provided sources?

The sources reference the history of smallpox vaccination, suggesting that early smallpox vaccines caused the disease they were meant to prevent. They also mention polio and measles outbreaks allegedly linked to vaccination efforts. Additionally, they point to data from past years indicating no measles-related deaths in the US for extended periods, while highlighting reported deaths and adverse events following MMR vaccination.

8. What is the overall message being conveyed regarding individual responsibility and action in the face of these concerns?

The overriding message is a call for individuals to take full personal responsibility for their health and well-being, rather than relying on government or conventional medical systems. This includes seeking alternative healthcare, stocking up on independent food sources, avoiding pharmaceutical products where possible, and being aware of what are perceived as broader agendas aimed at control. The speaker urges listeners to be proactive in protecting their health and becoming self-sufficient.

- Josh Sigersonson believes RFK Jr.'s changed stance on the MMR vaccine is due to being "confirmed by a pharma funded house" and potential blackmail, suggesting his political position now necessitates aligning with pharmaceutical interests.
- Sigersonson claims that measles has historically been a simple illness that people recover from quickly and that the majority of deaths attributed to measles are actually due to the vaccine itself, referencing historical data and anecdotal accounts.
- Children's Health Defense, through its CEO Mary Holland, distanced itself from RFK Jr.'s remarks, stating that as the Secretary of HHS, his views no longer represent the organization's position on vaccine safety.
- Del Bigtree criticized RFK Jr. on X (formerly Twitter), sarcastically suggesting that the MMR vaccine is also effective at causing autism. Zen Honeycutt of Moms Across America urged Kennedy to clarify his statement and acknowledge the potential serious side effects of the MMR vaccine.
- According to the "yourNEWS" article, RFK Jr.'s appointment of David Geier to lead federal vaccine research and his dismissal of Dr. Peter Marks from the FDA suggest continued alignment with vaccine skeptics. Additionally, the cancellation of a flu vaccine coordination meeting is cited.
- The "yourNEWS" article mentions budesonide and clarithromycin as alternative measles treatments that Kennedy has praised but are not proven to be effective against the disease.
- Sigersonson views the government as fundamentally flawed and heavily influenced by the pharmaceutical industry, which he believes prioritizes profit over public health. He advocates for individuals to "reject the system" and take personal responsibility for their health outside of mainstream medicine.
- Sigersonson uses the historical example of smallpox vaccines allegedly causing smallpox, citing an 1875 postcard, and the claim that polio outbreaks occurred after the introduction of Bill Gates's polio vaccines in Africa to support his argument.
- Learntherisk.org, according to Sigersonson, believes that there is no such thing as a safe vaccine, arguing that they are designed to compromise the immune system, potentially leading to more health issues in the long term, even if they suppress symptoms of one illness.
- American Values emphasized that the MAHA movement supports vaccine choice, not vaccine bans, urging supporters to "take a deep breath" and suggesting that RFK Jr. has not abandoned the "medical freedom movement" despite his MMR endorsement.

Glossary of Key Terms:

- **MMR Vaccine:** A combination vaccine against measles, mumps, and rubella (German measles).
- **Pharma Funded/Lobbied:** Refers to entities or individuals receiving financial support or being influenced by the pharmaceutical industry.
- **Medical Freedom Movement:** A movement advocating for individual autonomy in making healthcare decisions, including the right to refuse medical treatments like vaccines.
- **Informed Consent:** The ethical and legal principle requiring that a patient be fully informed of the risks, benefits, and alternatives of a medical procedure before consenting to it.
- **Vaccine Skeptic:** An individual who expresses doubts or concerns about the safety and/or efficacy of vaccines.
- **Autoimmune Disorder:** A condition in which the body's immune system mistakenly attacks healthy cells or tissues.
- **Contact Tracing:** The process of identifying and monitoring individuals who may have come into contact with an infected person to prevent further spread of a disease.

- VAERS (Vaccine Adverse Event Reporting System): A U.S. system for reporting adverse events that occur after vaccination.
- Alternative Treatments: Medical treatments or therapies that are not part of conventional, evidence-based medicine.
- Make America Healthy Again (MAHA): A movement associated with RFK Jr. that focuses on health and environmental issues, including concerns about vaccine safety.

EXTENDED BRIEF

This audio clip features Josh Sigersonson from World Alternative Media expressing strong disapproval of RFK Jr.'s recent statement endorsing the MMR vaccine for measles prevention. Sigersonson views this as a betrayal of RFK Jr.'s long-standing criticisms of vaccines and attributes this shift to his alleged co-option by "pharma funded" interests. The speaker urges listeners to reject mainstream healthcare, offering alternative solutions through a functional health practitioner and promoting unproven remedies. The overall tone is critical and conspiratorial, aiming to warn against government and pharmaceutical influence while advocating for individual health autonomy and self-reliance.

Discuss RFK Jr's stance.

Based on the sources, RFK Jr.'s stance on vaccines, particularly the MMR vaccine, appears to have shifted recently, sparking considerable backlash¹

Previously, RFK Jr. was known for his criticism of vaccine safety and mandates² . According to Josh Sigersonson of World Alternative Media, RFK Jr. had spent "years and years and years" and "about 20 years of his declarations" speaking out against measles vaccines³ Sigersonson even mentions RFK Jr.'s own organization, Children's Health Defense, publishing articles as recently as April 2nd, 2025, suggesting that measles scares were actually vaccine reactions³ Articles from Natural News in 2015 and 2019, which Sigersonson references, claimed that the measles vaccine was more dangerous than measles itself and cited CDC data suggesting more deaths from the vaccine than from the disease⁵

However, amidst a recent measles outbreak, Robert F. Kennedy Jr., now the Health and Human Services Secretary, stated that the MMR vaccine remains "the most effective way to prevent the spread of measles," according to *yourNEWS.com*² . This statement was made after health officials confirmed deaths and hundreds of infections related to measles outbreaks² .

This apparent shift in stance has been met with immediate and strong criticism⁷ .

•

Del Bigtree, his former communications director and a high-profile anti-vaccine advocate, responded critically, implying a link between the MMR vaccine and autism, despite scientific evidence to the contrary⁷ .

•

Children's Health Defense, the organization RFK Jr. founded, distanced itself from his remarks, stating that his current position as HHS Secretary means his words no longer represent the organization⁸ . CEO Mary Holland acknowledged the protective benefits of vaccines but also criticized their "very significant side effects"⁸ .

•

Josh Sigersonson expressed strong disapproval, stating, "And unfortunately, we have to do another I told you so video as RFK Jr. goes out and says the most effective way to prevent the spread of measles is the MMR vaccine"³. He views this as a confirmation of his predictions that RFK Jr. would align with the "pharma system" after being "confirmed by a pharma funded house"³ Sigersonson believes RFK Jr.'s past anti-vaccine rhetoric was a deception to gain support⁴

- Critics, including Derek Rose, pointed to RFK Jr.'s past associations and investments as warning signs of his potential shift in stance⁹.

- Some MAHA (Make America Healthy Again) supporters expressed disappointment, emphasizing the importance of "informed consent" and noting the FDA's documentation of rare MMR vaccine reactions¹⁰. Zen Honeycutt of Moms Across America called for Kennedy to provide clarity and acknowledge the risks associated with the MMR vaccine¹⁰

Despite his endorsement of the MMR vaccine, *yourNEWS.com* notes that Kennedy has taken other actions that continue to align with vaccine skeptics, such as appointing a controversial figure in the vaccine-autism debate to lead federal vaccine research and dismissing the FDA's top vaccine official¹². He also reportedly canceled a meeting on next year's flu vaccine coordination and continues to praise alternative measles treatments not proven effective¹² Amesh Adalja from the Johns Hopkins Center for Health Security noted that Kennedy has not fully explained his reasons for now supporting the MMR vaccine¹². The political action committee American Values, which supported his presidential campaign, urged supporters to "take a deep breath," emphasizing that MAHA supports vaccine choice¹⁰

In summary, RFK Jr.'s recent endorsement of the MMR vaccine as the most effective way to prevent measles has generated significant controversy and criticism from his long-time allies and supporters in the "medical freedom movement," who view it as a betrayal of his previous stance¹. While he publicly supports the MMR vaccine, some of his other actions and lack of detailed explanation leave room for interpretation regarding his broader views on vaccination¹².

Discuss Measles vaccine dangers.

Based on the sources provided, there is a significant debate and concern regarding the dangers of the measles vaccine, specifically the MMR vaccine.

According to Josh Sigersonson from World Alternative Media, RFK Jr.'s statement that the MMR vaccine is the most effective way to prevent measles contradicts his past views and aligns with a "pharma funded house"¹

Sigersonson claims that the majority of deaths associated with measles are actually due to the vaccine³. He further asserts that while the MMR vaccine might restrict measles symptoms, it can create "at least 10 times more problems that are extremely deadly afterwards"⁴. Sigersonson cites a case where parents believed the measles vaccine caused their child's death⁴. He also references learntherisk.org, stating, "There's no such thing as a safe vaccine. They are built to restrict or cause compromising issues with the immune system"⁴. Sigersonson shares a personal experience of developing asthma after a flu shot, attributing it to the injection and suggesting a link between vaccines and autoimmune disorders⁴

Sigersonson also mentions that Children's Health Defense, RFK Jr.'s former organization, reported in April 2025 that a "measles scare in Puma County turns out to be vaccine reaction"⁶. He cites several Natural News articles from 2015 and 2019 with alarming headlines like "Measles vaccine far more dangerous than measles itself"⁶, "Measles vaccine kill more people than measles. CDC data proves"⁶ ..., and "Measles vaccines kill more children than measles, and it's not even close"⁷. These articles claimed that there were no measles-related deaths in the US for over 15 years while reporting deaths due to the MMR vaccine⁷ Sigersonson suggests that conditions like chickenpox, smallpox, monkeypox, and measles are likely autoimmune disorders caused by injections⁷. He also draws a parallel to historical concerns about smallpox vaccines causing smallpox⁸

The yourNEWS.com article highlights the backlash RFK Jr. received for his endorsement of the MMR vaccine¹⁰. Del Bigtree, a former Kennedy communications director, critically responded by suggesting the MMR vaccine is also effective at causing autism, although this contradicts established scientific consensus¹¹. Children's Health Defense distanced itself from Kennedy's remarks, with CEO Mary Holland acknowledging the "protective benefits of vaccines" but also noting that "they also have very significant side effects"¹².

Some MAHA (Make America Healthy Again) supporters expressed disappointment, emphasizing the importance of "informed consent" and referencing FDA documentation of "rare MMR vaccine reactions, including encephalitis and Guillain-Barré syndrome"¹³. Zen Honeycutt of Moms Across America urged Kennedy to acknowledge the "risks of potential serious and sometimes deadly side effects of the MMR vaccine"¹⁴.

It is crucial to note that while these sources express significant concerns and present claims about the dangers of the measles vaccine, these views are often contrary to the widely accepted scientific and medical understanding of vaccine safety and efficacy. The sources provided heavily favor an anti-vaccine perspective.

Discuss Alternative health options.

Based on the sources, there is a significant discussion of alternative health options, primarily driven by Josh Sigersonson of World Alternative Media¹. His commentary revolves around rejecting the conventional medical system and embracing alternative approaches to health and well-being¹

Here are some of the alternative health options discussed in the sources:

-

Working with natural health practitioners: Josh Sigersonson urges listeners to "ditch your doctor today" and work with Christian Yordanov, a longevity author and functional health practitioner¹. Yordanov specializes in resolving existing health challenges, optimizing health, and increasing longevity through natural methods¹ Listeners can sign up for a free master class and a metabolic function assessment through a specific link¹

-

Using specific supplements: The sources promote leatril (amygdalin or vitamin B17) available online from Richardson Nutritional Center (rncstore.com), which was made famous by the book "World Without Cancer"² They offer apricot seeds and other related products²

-

Dietary changes and alternative food sources:

-

The importance of diet and avoiding processed foods is mentioned as a factor affecting immune function⁴.

-

whambeef.com is promoted as a source for freeze-dried steak, chicken, and ground beef with a long shelf life, guaranteed to be free of "ma jabs" and lab-grown meat³.

-

heavensharvest.com is recommended for long-term storable, non-GMO foods, including organic kits, heirloom seeds, and water filtration resources⁵.

-

wildpastures.com is highlighted for 100% grass-fed and finished beef, pasture-raised pork and chicken, and wild-caught seafood, raised on regenerative family farms without GMOs, hormones, steroids, or antibiotics⁵.

-

Alternative measles treatments: While noting they are not proven effective, the sources mention that RFK Jr. has continued to praise budesonide and clarithromycin as alternative measles treatments⁶.

-

Rejecting vaccines: Although RFK Jr.'s recent stance on the MMR vaccine has shifted, the general tone of Josh Sigersonson's commentary and the past content of Children's Health Defense and Natural News (referenced in the audio) advocate against vaccines, viewing them as harmful and ineffective¹ They suggest that measles itself is a simple illness and that vaccines can cause more problems, including autoimmune disorders⁷

-

Investing in precious metals: firstnationalbullion.com is promoted as a way to buy physical gold, silver, platinum, or palladium as an alternative to the conventional financial system⁵.

-

General lifestyle changes: The audio encourages listeners to "reject the system," "take personal responsibility for your lives," and avoid dependence on the government for health solutions¹

Josh Sigersonson frames these alternative options as a way to "get out of the pharma system" and take control of one's health, suggesting that the government and conventional medicine are detrimental to individual well-being¹

He believes that the government wants people to be "weak, stupid, ill, sick, and dumb" and dependent¹⁰ .

keep_pinSave to note

copy_all

thumb_down

Discuss Government control agenda.

Josh Sigersonson from World Alternative Media expresses a strong belief in a "government control agenda"¹ He argues that this agenda is being furthered by figures like RFK Jr., whom he now sees as aligned with the "pharma system" after being confirmed by a "pharma funded house"¹

Sigersonson believes this agenda manifests in several ways:

-

Control through the healthcare system: He urges people to "ditch your doctor today" and "get out of the pharma system"¹ He promotes alternative health practitioners and supplements as a way to reject this system¹

-

Vaccine mandates and promotion: Sigersonson criticizes RFK Jr.'s endorsement of the MMR vaccine, seeing it as a betrayal of his past stance against vaccines¹ He highlights RFK Jr.'s current support for contact tracing and the deployment of CDC teams to address the measles outbreak as further evidence of his participation in the government's control efforts² Sigersonson references articles from Children's Health Defense (RFK Jr.'s former organization) and Natural News that previously questioned the safety and efficacy of the measles vaccine, suggesting that the current "measles scare" might even be a result of vaccine reactions¹ He believes the promotion of vaccines, including those for measles, is part of a strategy to weaken people's immune systems from childhood through injections given to infants, toddlers, and even pregnant mothers⁶ .

-

Exploiting health crises for control: Sigersonson suggests that illnesses like measles are often exaggerated or even caused by vaccines themselves⁵ He mentions past instances like the smallpox and polio outbreaks, claiming that vaccines initially exacerbated these issues before their decline was falsely attributed to vaccination programs¹⁰ He also mentions the "COVID nonsense" and the "bird flu hoax" as examples of how the government uses health concerns to exert control, hinting at future restrictions and measures like "mRNA ration foods for military" and food restrictions²

-

Restrictions on individual freedom: Sigersonson views government intervention in health as a way to make people "weak, stupid, ill, sick, and dumb" and dependent on the state, thereby increasing control⁹ . He sees the promotion of digital IDs as another component of this restrictive scenario⁹

•

The "Great Reset" agenda: Sigersonson frames these events within a broader "Great Reset agenda," suggesting that various seemingly disparate actions by the government ultimately converge to consolidate control¹¹ .

Sigersonson implies that RFK Jr.'s shift in stance is a strategic move after being "confirmed by a pharma funded Israeli funded house," suggesting he is now part of this control agenda despite his past rhetoric³ He believes that relying on the government to solve problems created by the government is futile, as "government is organized crime"² . He emphasizes that the solution lies in individual responsibility and rejecting the system¹

While *yourNEWS.com*¹² ... focuses on the backlash to RFK Jr.'s MMR endorsement, it doesn't explicitly detail a broader "government control agenda" in the same way Sigersonson does. However, the article does highlight the concerns of "medical freedom advocates"¹² and vaccine skeptics¹³ ..., suggesting a segment of the population is wary of government influence in health matters. The emphasis on "informed consent" by some MAHA supporters¹⁸ also touches on the theme of individual autonomy versus government recommendations.

Discuss Supporting independent media.

Drawing on the sources, there is a strong emphasis on supporting independent media as a means of rejecting the mainstream system and accessing alternative information, particularly regarding health¹ . Josh Sigersonson of World Alternative Media explicitly urges listeners to "reject the system" and to seek information and products outside of conventional channels¹ . He frames supporting independent media as a way to find the truth and be the change² . Sigersonson's call to action includes several concrete steps for supporting independent media and alternative solutions¹ ...:

•

Following World Alternative Media: He encourages listeners to follow World Alternative Media on their various platforms¹ .

•

Financial Support: He makes a direct appeal for financial support for World Alternative Media due to a significant loss of revenue, suggesting platforms like Patreon, SubscribeStar, GoGetFunding, PayPal, Bitcoin, Cointree, and their Teespring store² He highlights their struggle against mainstream media and the need for listener support to survive² .

•

Ditching Mainstream Doctors: Sigersonson advocates for leaving the "pharma system" by working with natural health practitioners like Christian Yordanov at www.liveongerformmula.com/wamwam1 He suggests mentioning World Alternative Media upon signing up¹

•

Supporting Alternative Businesses: He promotes several businesses that offer alternatives to mainstream products, such as Richardson Nutritional Center for leatril online³ , WHAM Beef for natural beef⁴ , Heaven's Harvest for non-GMO storable foods⁵ , and Wild Pastures for sustainably raised meats and seafood⁵ . He often provides discount codes for these independent businesses, encouraging listeners to support them financially³

•

Investing in Precious Metals: He recommends First National Bullion for buying gold, silver, platinum, or palladium as a way to avoid the CBDC system and the current market collapse⁵ . He advises mentioning World Alternative Media when scheduling a consultation⁵ .

•

Utilizing Alternative Media Platforms: He encourages listeners to find World Alternative Media on platforms like Telegram, Rockfin, Band.Video, Bitshoot, Odyssey, Rumble, and Brighteon, specifically urging support on Rumble and Brighteon² .

Sigersonson views mainstream media as part of a "shadow government" and a "pharma funded house" that cannot be trusted³ He believes that true solutions come from individual action and rejecting the state³ His promotion of independent media and alternative solutions is directly linked to his skepticism towards conventional medicine and government narratives, particularly concerning vaccines³

While the *yourNEWS.com* article⁹ ... doesn't explicitly discuss supporting independent media, the backlash against RFK Jr.'s MMR endorsement from "longtime allies and health freedom advocates"⁹ suggests that these individuals likely rely on and support independent media outlets that are critical of mainstream vaccine narratives. Figures like Del Bigtree¹¹ and organizations like Children's Health Defense¹² , while not directly described as independent media in this source, often operate outside of mainstream channels and cater to audiences seeking alternative perspectives on health.

In conclusion, supporting independent media, according to the audio transcript, is presented as a vital act of self-reliance, truth-seeking, and resistance against a perceived corrupt mainstream system, particularly in the realm of health and information¹ It involves actively engaging with and financially supporting alternative content creators, businesses, and platforms that offer perspectives outside of the conventional narrative¹

thumb_down

This news article reports on the significant backlash faced by Health and Human Services Secretary Robert F. Kennedy Jr. after he publicly endorsed the MMR vaccine amidst a measles outbreak. This stance has drawn criticism from his traditional allies within the Make America Healthy Again (MAHA) movement and from prominent vaccine skeptics, given his past history of questioning vaccine safety. Despite his MMR support, Kennedy's continued actions, such as controversial appointments and promotion of unproven alternative treatments, suggest a complex and potentially unchanged underlying view on broader medical interventions, leaving many questioning the true nature of his current position.

Discuss Kennedy MMR endorsement.

Robert F. Kennedy Jr., now serving as the Health and Human Services Secretary, has publicly endorsed the measles, mumps, and rubella (MMR) vaccine amidst a deadly measles outbreak, stating that it "remains 'the most effective way to prevent the spread of measles,'" according to *yournews.com*¹ . This endorsement has sparked significant backlash from his longtime allies and health freedom advocates² .

Reactions from Allies and Medical Skeptics:

- Disappointment and Criticism: Kennedy's statement has been met with immediate criticism from prominent vaccine skeptics and allies within his Make America Healthy Again (MAHA) movement¹ .

- Del Bigtree's Response: Del Bigtree, his former communications director and a high-profile anti-vaccine advocate, responded critically, suggesting a link between the MMR vaccine and autism, a claim contradicted by multiple studies³ .

- Children's Health Defense: Kennedy's former organization, Children's Health Defense, sought to distance itself from his remarks. CEO Mary Holland stated that Kennedy's current role as HHS Secretary means his statements no longer represent the organization's views. While acknowledging potential protective benefits of vaccines, Holland also criticized their "very significant side effects"⁴ .

- MAHA Supporters' Views: Some MAHA supporters expressed disappointment, emphasizing the importance of "informed consent" and referencing the FDA's documentation of rare MMR vaccine reactions⁵ . The political action committee American Values, which supported Kennedy's presidential campaign, urged supporters to "take a deep breath," asserting that MAHA still supports vaccine choice⁵

- Call for Clarity: Zen Honeycutt, from Moms Across America, called on Kennedy to clarify his statement and acknowledge the potential risks of the MMR vaccine⁵

Josh Sigersonson's Perspective (World Alternative Media):

Josh Sigersonson of World Alternative Media strongly criticizes RFK Jr.'s endorsement, viewing it as a predictable betrayal⁸ . He highlights Kennedy's past statements against measles vaccines and suggests that his current stance is

a result of being "confirmed by a pharma funded house" and potential blackmail⁹ . Sigersonson believes that this signals a continuation of a system that is largely "pharma funded" and that individuals should reject this system by ditching their doctors and seeking alternative health practitioners⁸ .

Sigersonson refers to a post from RFK Jr.'s government account on April 6, 2025, where he mentioned supporting Texas health officials in controlling the measles outbreak by deploying CDC teams, supplying MMR vaccines, and stating that "The most effective way to prevent the spread of measles is the MMR vaccine"⁹

Sigersonson counters this by citing information suggesting that measles is a "simple illness that you get over real quickly" and that deaths associated with measles are often due to the "injection" itself¹⁰ . He also refers to claims from learntherisk.org that there is no such thing as a safe vaccine and that they compromise the immune system¹¹ . Furthermore, he mentions articles from Natural News from as far back as 2015 and 2019 which claimed that measles vaccines are more dangerous than measles and that there were no US measles deaths for over a decade prior to those dates¹² Sigersonson also points out the inconsistency with RFK Jr.'s own Children's Health Defense which, as recently as April 2nd, 2025, suggested that a "measles scare" could be a "vaccine reaction"¹² .

Sigersonson views Kennedy's actions as part of a larger "scop" or plan to lull people into a false sense of security while the government continues its agenda¹⁵ He urges people to take personal responsibility for their health and reject government intervention, recommending alternative healthcare options and products¹⁵

Kennedy's Actions Signaling Alignment with Vaccine Skeptics:

Despite his MMR endorsement, the *yournews.com* article notes that Kennedy has taken actions that seem to align with vaccine skeptics. These include:

- Appointing David Geier, a controversial figure in the vaccine-autism debate, to lead federal vaccine research¹⁹ .
- Dismissing Dr. Peter Marks, the FDA's top vaccine official¹⁹ .
- Canceling a planned meeting on next year's flu vaccine coordination⁶ .
- Continuing to praise alternative measles treatments not proven effective⁶ .

These actions, alongside his endorsement, create a complex and potentially contradictory picture of Kennedy's current stance on vaccines⁶ As *yournews.com* concludes, Kennedy's next steps will be crucial in defining his position within the medical freedom community and the administration⁷ .

Discuss Vaccine safety debate.

The sources present differing perspectives on the vaccine safety debate, particularly in light of Robert F. Kennedy Jr.'s recent endorsement of the MMR vaccine.

According to the audio transcript featuring Josh Sigersonson from World Alternative Media¹, RFK Jr. has stated that "the most effective way to prevent the spread of measles is the MMR vaccine"¹ Sigersonson views this as a significant reversal of RFK Jr.'s previous stance against measles vaccines and a confirmation of his prediction that RFK Jr. would align with pharmaceutical interests¹ Sigersonson claims that RFK Jr. has spent years "speaking out against measles vaccines MMR measles vaccines"². He criticizes RFK Jr.'s actions, including deploying the CDC and supplying MMR vaccines in response to a measles outbreak in Texas³.

Sigersonson's perspective, heavily represented in the audio transcript, is strongly anti-vaccine. He asserts that measles is typically a "simple illness that you get over real quickly" and suggests that deaths associated with measles are often due to the vaccine itself³. He references claims that MMR vaccines "might even restrict the symptoms of what they call measles" but create "at least 10 times more problems that are extremely deadly afterwards"⁴. The transcript cites "learntherisk.org" stating that "there's no such thing as a safe vaccine" and that they are "built to restrict or cause uh compromising issues with the immune system"⁴. Personal anecdotes are shared, linking vaccination to the development of autoimmune disorders like asthma⁴

The audio transcript also refers to information from Children's Health Defense (RFK Jr.'s former organization) from April 2nd, 2025, which allegedly stated that a "measles scare in Puma County turns out to be vaccine reaction"⁶. It also mentions older articles from Natural News (from 2015 and 2019) claiming that "measles vaccine [is] far more dangerous than measles itself"⁶, that "measles vaccine kill more people than measles" based on CDC data⁶ ..., and that there were "zero US measles deaths in 10 years, but over 100 measles vaccine deaths reported"⁷. These sources suggest that the MMR vaccine is more dangerous than measles and may cause deaths and other health issues⁷. The transcript also touches upon the historical context of measles, referencing a time when it was considered a "harmless right of passage"⁷. It further alleges that polio and measles were declining before vaccines and that some vaccine programs, like Bill Gates's polio efforts in Africa, led to outbreaks⁸. The transcript also presents the view that smallpox vaccines caused smallpox, suggesting a historical precedent for vaccines causing the very diseases they are meant to prevent⁸

In contrast, the news article from yournews.com¹⁰ focuses on the backlash RFK Jr. received *for* supporting the MMR vaccine amidst a measles outbreak¹⁰ This backlash came from his allies in the Make America Healthy Again (MAHA) movement and from vaccine skeptics, highlighting the deep divisions within this community¹⁰

Del Bigtree, a former Kennedy communications director and prominent anti-vaccine advocate, responded critically to RFK Jr.'s endorsement by suggesting the MMR vaccine is "also one of the most effective ways to cause autism," a claim that contradicts scientific consensus¹². Children's Health Defense, RFK Jr.'s former organization, also distanced itself from his remarks, with CEO Mary Holland stating that Kennedy's current role as HHS Secretary means his statements do not represent the organization's views¹³. While acknowledging potential protective benefits, Holland also mentioned that vaccines have "very significant side effects"¹³.

Vaccine policy experts like Amesh Adalja from Johns Hopkins Center for Health Security noted that RFK Jr. did not explain his reasons for supporting the MMR vaccine¹⁴. Despite his endorsement, RFK Jr.'s actions, such as appointing a controversial figure in the vaccine-autism debate and dismissing the FDA's top vaccine official, continue to align with vaccine skeptics¹⁴. His continued support for alternative, unproven measles treatments was also noted¹⁵.

Some MAHA supporters, while disappointed by RFK Jr.'s messaging, were urged by the American Values PAC to "take a deep breath" and were reminded that MAHA supports "vaccine choice, not vaccine bans"¹⁵ Other allies emphasized the importance of "informed consent" and referenced the FDA's documentation of rare MMR vaccine reactions¹⁶. Zen Honeycutt of Moms Across America called on RFK Jr. to clarify his statement and acknowledge the potential risks of the MMR vaccine¹⁶

In summary, the vaccine safety debate is portrayed in the sources as a contentious issue with strong opinions on both sides. The audio transcript presents a firm anti-vaccine perspective, viewing the MMR vaccine as dangerous and ineffective, and criticizing RFK Jr. for seemingly changing his stance. The news article highlights the internal conflict within the medical freedom community sparked by RFK Jr.'s endorsement of the MMR vaccine, showing that even those who are critical of traditional vaccine policies have differing views on specific vaccines and the appropriate response to outbreaks.

Discuss Measles outbreak response.

In response to a deadly measles outbreak, Health and Human Services Secretary Robert F. Kennedy Jr. publicly endorsed the measles, mumps, and rubella (MMR) vaccine, stating it "remains 'the most effective way to prevent the spread of measles,'" according to *yournews.com*¹ This outbreak involves confirmed deaths of two children and hundreds of infections in Texas and other states². As of April 6, 2025, there were 642 confirmed cases across 22 states, with 499 of those in Texas³.

RFK Jr. stated that he came to Gaines County, Texas, to comfort families affected by the loss of children due to measles³. He also expressed his intention to support Texas health officials and learn how HHS agencies can better partner with them to control the outbreak³. His actions included deploying CDC teams to Texas to bolster local and state response capacity, supplying pharmacies and Texas-run clinics with needed MMR vaccines and other medical supplies, and working with local schools and healthcare facilities to support contact investigations³. Kennedy also mentioned speaking with Governor Abbott and offering continued HHS support, redeploying CDC teams at his request³.

However, this response, particularly the endorsement of the MMR vaccine, has sparked significant backlash¹.

•

Criticism from Allies and Medical Skeptics: Many longtime allies and health freedom advocates have criticized Kennedy's stance¹ . Del Bigtree, his former communications director, sarcastically commented on X (formerly Twitter) that the MMR vaccine is also "one of the most effective ways to cause autism," contradicting scientific consensus⁴ .

Children's Health Defense: Kennedy's former organization distanced itself from his remarks. CEO Mary Holland stated that Kennedy's current role as HHS Secretary means his statements no longer represent the organization's views, while still acknowledging potential protective benefits but also "very significant side effects" of vaccines⁵ .

MAHA Supporters: Some supporters of Kennedy's Make America Healthy Again (MAHA) movement expressed disappointment, emphasizing "informed consent" and referencing rare MMR vaccine reactions documented by the FDA⁶ . The American Values PAC, which supported Kennedy's presidential campaign, urged supporters to "take a deep breath," asserting that MAHA still supports vaccine choice⁶

Call for Clarity: Zen Honeycutt of Moms Across America called on Kennedy to clarify his statement and acknowledge the potential risks of the MMR vaccine⁶

Josh Sigersonson of World Alternative Media strongly criticized RFK Jr.'s endorsement, viewing it as a predictable "betrayal" given his confirmation by a "pharma funded house" and suggesting potential blackmail⁹ Sigersonson cited RFK Jr.'s April 6, 2025 post on his government account promoting the MMR vaccine as the most effective way to prevent measles spread³ He countered this by claiming measles is a "simple illness that you get over real quickly" and that deaths associated with it are often due to the "injection"³ . He referred to information from learntherisk.org stating there is no safe vaccine and that they compromise the immune system¹¹ . Sigersonson also highlighted past claims from Natural News (from 2015 and 2019) asserting that measles vaccines are more dangerous than measles and that there were no US measles deaths for over a decade prior to those dates¹² He further pointed out that Children's Health Defense, as recently as April 2nd, 2025, suggested a "measles scare" could be a "vaccine reaction"¹² .

Sigersonson believes RFK Jr.'s actions are part of a larger plan to mislead people while the government pursues its agenda, urging individuals to reject the system, ditch their doctors, and seek alternative health practitioners like Christian Yordanov⁹ He also promoted resources like rncstore.com for leatrile, whambeef.com for meat products, and heavensharvest.com for long-term storable foods as ways to take personal responsibility for health and avoid dependence on the government⁹

Despite his MMR endorsement, *yournews.com* points out that Kennedy has taken actions that align with vaccine skeptics, such as appointing David Geier to lead federal vaccine research, dismissing the FDA's top vaccine official, canceling a flu vaccine coordination meeting, and continuing to praise alternative measles treatments not proven effective⁷ These actions create a complex picture of Kennedy's current stance⁷

Discuss MAHA allies backlash.

Robert F. Kennedy Jr.'s endorsement of the MMR vaccine has indeed sparked backlash from his allies within the Make America Healthy Again (MAHA) movement¹

Here's a breakdown of the reactions from MAHA allies:

-

Disappointment among some MAHA supporters: Some supporters within the MAHA movement expressed disappointment with Kennedy's statement³ . One ally specifically mentioned that Kennedy "should have stood for informed consent," referencing the FDA's documentation of rare MMR vaccine reactions such as encephalitis and Guillain-Barré syndrome³ .

-

Emphasis on vaccine choice: The political action committee American Values, which supported Kennedy's presidential campaign, urged supporters to "take a deep breath" and asserted that Kennedy had not abandoned the "medical freedom movement"⁴ . The group emphasized that MAHA supports vaccine choice, rather than vaccine bans³ . This suggests that while they might not agree with the endorsement, they are trying to frame it within the context of individual liberty to choose.

-

Call for clarity and acknowledgment of risks: Zen Honeycutt, the founding executive director of Moms Across America, called on Kennedy to directly address the controversy³ . She urged Kennedy to "provide clarity on his statement and balance it with acknowledgment of the risks of potential serious and sometimes deadly side effects of the MMR vaccine"⁵ . This indicates a desire for Kennedy to acknowledge the concerns that have been central to his past rhetoric and the broader medical freedom movement.

In summary, the backlash from MAHA allies includes disappointment from some supporters who feel it contradicts the movement's principles, while the movement's leadership emphasizes the importance of vaccine choice. There is also a clear call for Kennedy to clarify his position and acknowledge the potential risks associated with the MMR vaccine³

Discuss Medical freedom movement.

The sources provide insights into the medical freedom movement, particularly through the lens of the backlash against Robert F. Kennedy Jr.'s recent endorsement of the MMR vaccine¹

From the perspective of Josh Sigersonson at World Alternative Media³, the medical freedom movement is characterized by a strong rejection of mainstream medical and pharmaceutical systems³. Sigersonson urges people to "reject the system" and "ditch your doctor today"³. He promotes alternative health practitioners and resources, suggesting individuals take "personal responsibility for your lives" instead of relying on the government³ This viewpoint is deeply skeptical of vaccines, with claims that "there's no such thing as a safe vaccine"⁶, that they "restrict or cause uh compromising issues with the immune system"⁶, and that the MMR vaccine is "far more dangerous than measles itself"⁷ Sigersonson highlights historical claims that smallpox vaccines caused smallpox and that polio and measles were declining before vaccines⁹. He sees RFK Jr.'s endorsement of the MMR vaccine as a betrayal of the medical freedom cause, suggesting it was influenced by pharmaceutical interests and blackmail³ The *yournews.com* article¹ offers another perspective on the medical freedom movement, focusing on the reaction of MAHA (Make America Healthy Again) allies and medical skeptics to RFK Jr.'s statement¹. This source indicates that a central tenet of this movement is vaccine choice, not vaccine bans¹¹. While some MAHA supporters were disappointed by RFK Jr.'s endorsement, emphasizing the need for informed consent and referencing potential rare MMR vaccine reactions¹¹, the American Values PAC urged supporters to remain calm, reiterating the movement's support for individual choice¹¹ Zen Honeycutt of Moms Across America called for Kennedy to balance his statement with an acknowledgment of the MMR vaccine's potential risks¹¹

The backlash from figures like Del Bigtree¹⁴ and Children's Health Defense¹⁵ further illustrates the diverse opinions within the broader medical freedom movement. While they may share skepticism towards certain vaccine policies, RFK Jr.'s endorsement of the MMR vaccine during an outbreak has created a clear division¹. Children's Health Defense, while acknowledging potential protective benefits of vaccines, also emphasizes that they have "very significant side effects"¹⁵.

In summary, the medical freedom movement, as depicted in these sources, is a complex and diverse landscape united by a general skepticism towards conventional medical approaches, particularly vaccination, and a strong emphasis on individual autonomy and the right to make informed medical choices¹ However, there are varying degrees of skepticism and differing opinions on specific vaccines and the appropriate response to public health issues like measles outbreaks, as evidenced by the internal conflict within RFK Jr.'s former allies¹ Some within the movement advocate for complete rejection of vaccines and mainstream medicine³, while others focus on the principles of vaccine choice and informed consent¹¹.
